About Data

Cost Optimization & Margin Protection

Improve delivery speed and lower costs by identifying exactly what causes delays—like bad weather or transport issues. By balancing partner performance with affordable shipping, we can ensure every package arrives on time and every customer stays happy with the service.

Problem

About Data :

delivery_id

Unique identifier for each individual shipment.

delivery_partner

The company handling the delivery (e.g., Delhivery, FedEx, Blue Dart).

package_type

Category of the items (e.g., Electronics, Groceries, Fragile).

vehicle_type

Mode of transport (Bike, Van, Truck, Electric Vehicle).

delivery_mode

Speed of service (Standard, Express, Same Day).

region

Geographic area (North, South, East, West, Central).

weather_condition

Weather during transit (Clear, Rainy, Foggy, Stormy, etc.).

distance_km

The total distance traveled in kilometers.

package_weight_kg

The weight of the parcel in kilograms.

delayed

Binary flag (Yes/No) indicating if the delivery missed its target.

delivery_status

Current state (Delivered, In Transit, Failed, etc.).

delivery_rating

Customer feedback score (usually 1–5).

delivery_cost

The final calculated cost of the shipment.
